CSS Selector Questions

This page lists questions and actions for current CSS selectors (just going down the design.css file). Are they still necessary or should they be replaced with Bootstrap selectors?

/* ckeeditor body definition */
html[dir=ltr] > body << REMOVED >>

#role_main { min-height: 40em; } << REMOVED - Presumably, layout properties like this are covered by Bootstrap. >>

/* Some default values for basic CSS menus layout */
.cssmenu_horiz a, .cssmenu_vert a, .cssmenu_horiz ul li a << REMOVED - if needed, it should be in a cssmenu stylesheet section. >>

.floatright
.floatleft << REMOVED (but this currently causes the site logo and title to stack rather than be in-line) - Should be replaced with equivalent Bootstrap, or removed - check instances in templates. >>

.sitetitle,
sitesubtitle { line-height: 1; } << REMOVED >>

.iconmenu { display: inline; } << Used by Kultura in link text. >>

label { cursor: pointer; } << REMOVED >>

<< The .siteloginbar rules were REMOVED as obsolete. >>

<< The module positioning rules such as for site logo and #sitesearchbar should be replaced by modules with parameters. >>

#sitesearchbar << REMOVED >>

#tiki-top form.findtable {margin-top: 0;
margin-bottom: 0;} << REMOVED >>

#tiki-top table {
    width: auto;
    white-space: nowrap; } << REMOVED >>

.box-quickadmin << Should cssmenu styles should be replaced by bootstrap drop-down? >>

.mod-share-item << Replace by putting in a module? >>

.fullscreen .tellafriend,  << REMOVED - Replace by putting in a module? >>
.fullscreen .share

.error.icon { font-weight: bold; color: #090; } << Replace? Can't find this used. >>

.fullscreenbutton,
#fullscreenbutton,  << Fullscreen code is currently missing from layout_view.tpl. Should
the fullscreen method be re-added, or replaced? >>

#tiki-clean << REMOVED. This is for print view, right? Still needed? >>

.floatlist << REMOVED. Found only in stylesheets. >>

#bottom_modules .box-rsslist br {
    display: none; } << REMOVED >>

#attzone,
#comzone,
#edithelpzone, << This one used only in tiki-user_tasks.tpl. >>
#rules-copy-panel { display: none; } << Presumably still needed but not sure. >>

.clear,
#clear { clear: both; } << Are these still needed (we're supporting newer browsers now)? >>

.imagerank { margin: 10px 5px; } << REMOVED. Only found in stylesheets. >>

#tiki-top form.findtable
#tiki-top table << REMOVED, and hopefully, not needed. >>

#top_modules .box-quickadmin << Should this be positioned in design.css, or set in admin-modules? The latter, I would think. >>

#bottom_modules .box-rsslist br << REMOVED - The br isn't in wikiplugin_rss.tpl so I don't know if the break is still being produced. >>

.mod-share-item
.mod-share-item a img
.mod-share-item.google-root
.fullscreen .tellafriend,
.fullscreen .share
.share img
#rss
#power
#credits << Rules REMOVED - To be displayed via modules. >>

.mod-share-item.google-root {
    margin-left: .5em;
}

/* centercolumn */
.fullscreen .tellafriend,
.fullscreen .share {
    margin-right: 100px;
    margin-top: 2px;
}

.share img {margin-bottom: -5px;}
#rss { padding: 1em 1em 0; }
#power padding: 0 1em 1em;
    font-size: .9em;}
#credits {display: inline;} << REMOVED >>
ul.jumplinks << REMOVED - Probably HTML5 role replaces this, as a visually impaired access method. >>

.fullscreenbutton,
#fullscreenbutton << REMOVED - What is the best way currently to get the full-screen (For main content) effect? >>

#tiki-clean << REMOVED - should be covered by Bootstrap print. >>

.floatlist
.floatlist li << REMOVED - Though I'm not sure of the purpose. Will check in the templates. >>

.mod-share-item {
    float: left; } << REMOVED >>

.mod-share-item a img {
    margin-right: .5em; } << REMOVED >>

.mini {
    width: 100%;
    text-align: center;
    margin-left: auto;
    margin-right: auto;
} << This can't be replaced by a single Bootstrap class. About 22 instances in tpls. >>

.pagenums input[type="text"] {margin-top: -1px;} << One instance: block.pagination_links.php. Will Bootstrap pagination classes be used? >>

a.tikihelp,
a.tikihelp:visited {
    border: 0;
    vertical-align: text-top; }

.iconmenutext { white-space: nowrap;} << 1 instance, in function.icon.php. >>

#rss img,
a.icon,
img.icon {
    vertical-align: middle;
} << Many instances, so OK to retain unless there's a better for same result. >>

#attzoneopen,
#comzoneopen,
#attzone {
/** Titles (not boxed) bold lines alone not in summary used by categobjects.tpl + ? */
.simple_title { font-weight: bold; }

/* New Toolbars */
textarea-toolbar << Two instances: wiki_edit.tpl and tiki-map_edit.tpl. >>

/* New Help section */
tikihelp << This is new, so apparently still used. >>

.simple_inlinehelp {
  font-style: italic;
  font-size: small;
  font-family: sans-serif; }

.box-share > div { text-align: center; }

.plugin-form-float << This has many properties so hopefully can be replaced with a Bootstrap class. >>

.icon_edit_section { float: right; }
.icon_edit_section img.icon { margin-top: -1px !important; }

#bottom_modules .box-rsslist br {
  display: none; }

/* Boxes */
.box-title,
.box-data << Replaced already with Bootstrap panel classes. >>

.modules { position: relative; }

#role_main .module { max-width: 180px; }

h3.box-title << changed to h3.panel-title. >>

.moduleflip,
.box-title span img.flipmodimage << These still work, I believe. Is there a better way? >>

.box-data table { width: 100%; }

.box-data a.linkmenu { display: block; }

.box-data ol,
.box-data ul {
  padding-left: 2em;
Can the element be given a generic class?

Should be refactored somehow.

Why float left when text is align left already?

Maybe ok?

Maybe ok?

Isn't display: block by default? Check appearance without these rules.

Probably needed? Check without.

Probably not needed because older browses aren't supported any more.

Next in design.css come the feature-specific rules. These should be considered separately. Bootstrap doesn't have any awareness of them. They need to be revamped for more global styling, etc. Roughly (r48556) lines 520 to 1500.

Will REMOVE. Change class to text-center.

No Bootstrap equiv. Probably rename to text-justify.

No Bootstrap equiv. Probably rename to text-right, -left, but check instances to see if they are necessary or exist due to kludgy code.

The reason why they have no equiv in Bootstrap is logical. They are wrong. They are dictating designers and users how text should be aligned instead of letting them decide. There should be no text-center etc. Just maybe class="aligned" for the element wrapper? Give the theme designers freedom of choice!

Is there something similar in Bootstrap? Check behavior and find similar.

REMOVED.

New unsorted */

One instance: box-webmail_inbox.php
