

Snow theme available

 Gary Cunningham-Lee - Tue 04 of Apr, 2006 05:36 GMT-0000 - (11806 Reads)

Just in time for the approaching winter (OK, in the Southern Hemisphere), the Snow theme for Tiki CMS is available for downloading. This is a full-width, three-column design with snowflake-pattern page backgrounds, module boxes, etc. A Flash .fla file is included for making a logo with a snowfall effect.

Please visit Snow for more information. The archive can be downloaded at the New Themes [file gallery](#). (Users must be logged in to download files — register first at tikiwiki.org [if necessary](#). See New Themes [forum](#) [for support questions and other discussion about this theme](#).)
