Module Menu type structure shows structure tree wrong | Themes for Tiki Wiki CMS Groupware
Module Menu type structure shows structure tree wrong

Status
 Open

Summary
Module Menu type structure shows structure tree wrong

Description
structures -> the structures behave weird:
the menu items do not appear in the "module_menu" as they would be set in the structures tree
just click on this link:
<http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-index.php?page=Bootstrap> 
usr: admin / pw: admin

You will find a horizontal structure menu under the main themes navigation menu (top bar).

Please compare that with the structure tree and you will see what I mean.
http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-edit_structure.php?page=Bootstrap&page_ref_id=11 
usr: admin / pw: admin

This might be connected to LPHs change of menu behaviour from superfish to bootstrap

You can dump a snapshot of the installation (Running trunk svn) with one click at any time in the
bugtracker/wishlist:
<http://dev.tiki.org/item4948>
