Tiki Customization

Feature Examples

Find

Tikipedia_OLD

Page contents

Tikipedia is based on [Mediawiki](#)'s Vector style, also used at Wikipedia.org. The Tikipedia theme for Tiki CMS was done to illustrate the flexibility of Tiki's design capabilities. **Please note that the right-hand column of this web site is turned off when the Tikipedia theme is demonstrated. The right column can be used with the Tikipedia theme if desired, but the appearance is then less authentic since Mediawiki has no right-hand column.**

New information for Tiki 7!

Be sure to remove all old template files

Older Tikipedia template files (in *templates/styles/tikipedia*) are incompatible with Tiki 3 and must be removed, for the theme to work correctly. The Tikipedia theme now uses no special Smarty template (.tpl) files. It relies on the flexibility provided by Tiki's module system for page content.

Uses normal Tiki modules

To retain the Mediawiki appearance, modules shouldn't be put in the Top and Topbar module zones. This assures that the top of the left column, where the logo is, will be flush with the page top.

Recommended module assignments (in this order) -> Pagetop: login_box (nobox=y, mode=popup), search (nobox=y); Left: logo (nobox=y, flip=n, style=overflow: hidden), Tools (title=Tools; custom module data described below), menu (type=vert).

Tools module data (this is moved here from tiki-wiki_topline.tpl, about lines 22-135):

```
{if $page} {if ! isset($versioned)} {if $print_page ne 'y'} <div class="wikiactions" style="float: right; padding-left:10px; white-space: nowrap"> <div class="icons" style="float: left;"> {if $pdf_export eq 'y'} <a href="tiki-print.php?{query display="pdf" page=$page}" title="{tr}PDF{/tr}">{icon _id='page_white_acrobat' alt="{tr}PDF{/tr}"}</a> {/if} {if $prefs.flaggedrev_approval neq 'y' or !$revision_approval or $lastVersion eq $revision_displayed} {if $editable and ($tiki_p_edit eq 'y' or $page|lower eq 'sandbox') and $beingEdited ne 'y' and $machine_translate_to_lang eq " or $canEditStaging eq 'y'} <a title="{tr}Edit this page{/tr}" {ajax_href template="tiki-editpage.tpl"}tiki-editpage.php?page={if isset($needsStaging) && $needsStaging eq 'y'}{$stagingPageName|escape:"url"}{else}{$page|escape:"url"}{/if}{if !empty($page_ref_id) and
