Several features in Tiki are themed via jQuery UI ThemeRoller, and we have a jQueryUI theme picker, which is distinct from the global Tiki theme picker. http://arshaw.com/fullcalendar/docs/display/theme/ - Spreadsheet - etc. This was a problem before Bootstrap, and we need to find a way to address this. when using the drag and drop modules to move a module around. The save button does'nt show up {flash type="url" movie="display131" width="667" height="465"}	Fri 22 of Nov, 2013 18:48 GMT-0000	Fri 22 of Nov, 2013 18:48 GMT-0000	pascalstjean	0
I tried to move the "Bootstrap Component XYZ" pages one menu level deeper (in the structure tree), but the "save" button disappeared from Tiki 12 to Tiki 13. So I cannot apply the reorganised structure menu items (pages). http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-edit_structure.php?page=Bootstrap&page_ref_id=11 usr: admin pw: admin You can dump a snapshot of the installation (Running trunk svn) with one click at any time in the bugtracker/wishlist: http://dev.tiki.org/item4948	Tue 19 of Nov, 2013 20:29 GMT-0000	Thu 21 of Nov, 2013 19:10 GMT-0000	pascalstjean	1 pascalstjean-Thu 21 of Nov, 2013
In order for images to be responsive, we need to use percentage and not a fixed Pixel variable. The current Tiki IMG plugin takes Pixels. We should enforce percentage as to not break the grid	Tue 19 of Nov, 2013 18:38 GMT-0000	Thu 21 of Nov, 2013 19:09 GMT-0000	pascalstjean	2 luci-Wed 27 of Nov, 2013
Clicking on an item within Tab 2, 3 etc... Doesn't go back to the proper tab. Always goes back to Tab 1 http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-admin_modules.php?um_edit=menu_42&cookietab=2#editcreate as you can see in the link, "cookietab=2" this variable is not being supported right now	Tue 19 of Nov, 2013 18:35 GMT-0000	Thu 21 of Nov, 2013 19:09 GMT-0000	pascalstjean	0
structures -> the structures behave weird: the menu items do not appear in the "module_menu" as they would be set in the structures tree just click on this link: http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-index.php?page=Bootstrap usr: admin / pw: admin You will find a horizontal structure menu under the main themes navigation menu (top bar). Please compare that with the structure tree and you will see what I mean. http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-edit_structure.php?page=Bootstrap&page_ref_id=11 usr: admin / pw: admin This might be connected to LPHs change of menu behaviour from superfish to bootstrap You can dump a snapshot of the installation (Running trunk svn) with one click at any time in the bugtracker/wishlist: http://dev.tiki.org/item4948	Tue 19 of Nov, 2013 20:23 GMT-0000	Thu 21 of Nov, 2013 19:06 GMT-0000	pascalstjean	0
