Look_and_Feel_options_schematic

TikiWiki has had an admin interface to display site identity options flexibly, but in previous releases these items were generally just added in a vertical stack, since there wasn't any particular "top" to the page.

But for themes that have a specific area for site identity items, stacking won't work. Instead, the items must be placed side-by-side. This page describes the method being used to place these items, which include the logo, banner ad, search form, log-in form Look & Feel options, and the div that holds custom code data.

Following the logic of the tiki-site_header.tpl template file, this is how items are displayed:

Custom code with and without a banner ad

```
(if custom code is used)
   (if there is an ad banner)
   <div id="sitead" class="floatright">
      (Banner is displayed here.)
   </div>
   <div id="customcodewith_ad">
      (Here will be parsed the 400px-wide custom site header code.}
   </div>
```

```
(else)
   <div id="customcode">
      (Full-width custom code area here.)
   </div>
(/if)
```

Absolute-positioned search, fullscreen button and login shown here are options for all configurations.

```
(else)
```

...Look & Feel options with no custom code:

Displaying a logo, with or without an ad banner

```
(if there is a logo and the logo left or right)
   <div class="clearfix" id="sioptions">
```

```
    (if logo is at left)
      (if there is an ad)
        <div id="sitead" class="floatright">
          (Ad goes here.)
        </div>
      (/if)
      <div id="sitelogo" class="floatleft">
        (Logo goes here.)
      </div>
    (/if)
```

```
    (if logo is at right)
      {if there is an ad)
        <div id="sitead" class="floatleft">
          (Ad goes here.)
        </div>
      (/if)
      <div id="sitelogo" class="floatright">
          (Logo goes here.)
      </div>
    (/if)
    </div>
(/if)
```

{img src="img/wiki_up/Look_and_feel-ad_and_logo.png" }

Logo centered, and there is an ad: to work in small vertical space, the ad (halfbanner) is floated left; a second banner zone is floated right

```
    (if logo and logo is centered}
      <div class="clearfix" id="sioptionscentered">
        (if there is an ad banner)
        <div id="bannertopright" class="floatright">
          ( ad goes here.)
        </div>
      <div id="sitead" class="floatleft">
        (Ad goes here.)
      </div>
      (/if)
   <div id="sitelogo">
      (Logo goes here.)
   </div>
</div>
(/if)
```

No logo but there is an ad, so ad is centered.

```
  (if no logo)
    (if there is an ad)
    <div style="text-align:center">
      (Ad goes here.)
    </div>
    (/if)
  (/if)
```

```
(/if)
```

Finally, tiki-site_header.tpl has code for the login form:

```
   (if site header login)
      (Site header log-in form goes here.)
   (/if)
(/if}
```

This is the method used for new themes including Darkroom, Feb12, The News, and Tikinewt, in Branch 2.0, and for themes listed on http://themes.tikiwiki.org/Themes_for_TW2 ⌕. There are variations in some cases due to theme-specific space configurations, etc.

Very possibly this code could be improved, and I'd welcome that.
