Description	Created	LastModif	Last modified by	Comments
<p>WYSIWYG properly wraps and responds but not the Regular Editor</p>  The image shows two side-by-side screenshots of the Tiki Wiki's editing interface. The left screenshot shows the 'Regular Editor' with a text area containing HTML code for a Bootstrap navbar. A red arrow points to the code, and a red text overlay says 'Regular Editor NOT Responsive'. The right screenshot shows the 'WYSIWYG' editor, where the same content is rendered as a visual navbar. A red text overlay says 'Notice how the WYSIWYG will wrap and respond'. <p>when using the drag and drop modules to move a module around. The save button does'nt show up {flash type="url" movie="display131" width="667" height="465"}</p> <p>visible at http://nextdev.tiki.org/tiki-list_object_permissions.php as discussed on http://dev.tiki.org/wish4871</p>  The image is a screenshot of the 'Object Permissions List' page in the Tiki Wiki. It shows a sidebar with navigation links like 'paces', 'Main Menu', and 'Following lists'. The main content area has a title 'Object Permissions List' and a 'Group Filter' dropdown. Below this, there are three tabs: 'Global Permissions (3)', 'Object Permissions (0)', and 'Category Permissions (0)'. The 'Object Permissions (0)' tab is selected, showing a table with columns for 'Object', 'Permissions', and 'Actions'. The table is currently empty. <p>The Edit Wiki Page is responsive and wraps. But the edit blog post page seems to be fixed width</p> 	Tue 19 of Nov, 2013 20:04 GMT-0000	Thu 21 of Nov, 2013 16:04 GMT-0000	marclaporte	0
<p>structures -> the structures behave weird: the menu items do not appear in the "module_menu" as they would be set in the structures tree just click on this link: http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-index.php?page=Bootstrap usr: admin / pw: admin You will find a horizontal structure menu under the main themes navigation menu (top bar). Please compare that with the structure tree and you will see what I mean. http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-edit_structure.php?page=Bootstrap&page_ref_id=11 usr: admin / pw: admin This might be connected to LPHs change of menu behaviour from superfish to bootstrap You can dump a snapshot of the installation (Running trunk svn) with one click at any time in the bugtracker/wishlist: http://dev.tiki.org/item4948</p>	Tue 19 of Nov, 2013 20:23 GMT-0000	Thu 21 of Nov, 2013 19:06 GMT-0000	pascalstjean	0
<p>Something like this: http://minhur.github.io/bootstrap-toggle/</p>	Mon 25 of Nov, 2013 08:01 GMT-0000	Mon 25 of Nov, 2013 08:01 GMT-0000	marclaporte	0
<p>Several features in Tiki are themed via jQuery UI ThemeRoller, and we have a jQueryUI theme picker, which is distinct from the global Tiki theme picker.</p> <ul style="list-style-type: none"> http://arshaw.com/fullcalendar/docs/display/theme/ Spreadsheet etc. 	Mon 25 of Nov, 2013 08:15 GMT-0000	Mon 13 of Jun, 2016 04:53 GMT-0000	chibaguy	0
<p>This was a problem before Bootstrap, and we need to find a way to address this.</p> <p>Related links</p> <ul style="list-style-type: none"> https://addyosmani.com/blog/jquery-ui-bootstrap/ http://www.pontikis.net/blog/jquery-ui-bootstrap-ui-button-icon-secondary 	Tue 26 of Nov, 2013 09:53 GMT-0000	Tue 26 of Nov, 2013 09:53 GMT-0000	gezza	0
<p>In order for images to be responsive, we need to use percentage and not a fixed Pixel variable. The current Tiki IMG plugin takes Pixels. We should enforce percentage as to not break the grid</p>	Tue 19 of Nov, 2013 18:38 GMT-0000	Thu 21 of Nov, 2013 19:09 GMT-0000	pascalstjean	2 luci-Wed 27 of Nov, 2013
<p>I tried to move the "Bootstrap Component XYZ" pages one menu level deeper (in the structure tree), but the "save" button disappeared from Tiki 12 to Tiki 13. So I cannot apply the reorganised structure menu items (pages). http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-edit_structure.php?page=Bootstrap&page_ref_id=11 usr: admin pw: admin You can dump a snapshot of the installation (Running trunk svn) with one click at any time in the bugtracker/wishlist: http://dev.tiki.org/item4948</p>	Tue 19 of Nov, 2013 20:29 GMT-0000	Thu 21 of Nov, 2013 19:10 GMT-0000	pascalstjean	1 pascalstjean-Thu 21 of Nov, 2013

Tip

To use a CSS (Superfish) menu, use one of these syntaxes:

- {menu id=X type=vert}
- {menu id=X type=horiz}

To use a default Tiki menu:

- {menu id=X css=n}

H1 H2 H3

Save

First: [Remove current calendar templates and converge on FullCalendar](#)
And then, make Bootstrap & responsive

Clicking on an item within Tab 2, 3 etc... Doesn't go back to the proper tab. Always goes back to Tab 1
http://pascalstjean-10536-4948.show.tikiwiki.org/tiki-admin_modules.php?um_edit=menu_42&cookietab=2#editcreate
as you can see in the link, "cookietab=2" this variable is not being supported right now

Clicking on add module button in Admin Modules doesn't work
