Tikinewt problem with help button in search\_box

Status  
✖ Closed

Summary  
Tikinewt problem with help button in search\_box

Description  
The advanced search help button in module search\_box is malfunctioning in the Tikinewt theme in most cases. Instead of opening a shadowbox with the help content, it does nothing.  
  
It only works properly in Tikinewt if the floating help (Big Blue Help Button/BBHB) is displayed. For some reason, the BBHB only displays when first placing a page into edit mode (disappears after previewing).  
  
By contrast, in the strasa theme, the search\_box help button works consistently, regardless of whether the BBHB feature is even enabled.

This problem has been replicated on XP/IEv6, Vista/IEv7, Vista/FFv?.
